For my first and second mathematical statistics courses, we are using this text. This is a really great book. It

is fairly short, and each section is on average only 2-3 pages, but those 2-3 pages are absolutely packed with good stuff. Usually there will be a short introductory paragraph on the topic, and then the authors get right into theorems and examples. There are usually 2-3 theorems and 2-3 examples per section, and they are all organized very well.
