

the psychology of associative pdf

Free association is a technique used in psychoanalysis (and also in psychodynamic theory) which was originally devised by Sigmund Freud out of the hypnotic method of his mentor and colleague, Josef Breuer.. Freud described it as such: "The importance of free association is that the patients spoke for themselves, rather than repeating the ideas of the analyst; they work through their own ...

In semantic priming, the prime and the target are from the same semantic category and share features. For example, the word dog is a semantic prime for wolf, because the two are similar animals. Semantic priming is theorized to work because of spreading activation within associative networks. When a person thinks of one item in a category, similar items are stimulated by the brain.
